

Molecular Statistics, Exam Projects

2014

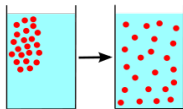

Projects

1. Diffusion Coefficient of the Lennard-Jones Fluid (**LAB**)
2. Genetic Algorithm (**JCK**)
3. Ising Spin-Lattice (**LAB**)

Project 1: Diffusion Coefficient

Self-diffusion in Lennard-Jones Fluid.

Mean-Square Displacement

Velocity Auto-Correlation Function

$$D = \lim_{t \rightarrow \infty} \frac{\text{MSD}(t)}{6t} = \frac{1}{3} \int_0^{\infty} \text{VACF}(t) dt$$

Project 2: Diffusion Coefficient

Project description:

- Simulate diffusion under different simulation conditions (pressure, temperature, etc.) using MD in Python.
- Calculate MSD and VACF.
- Calculate diffusion coefficients.

Project 2: Genetic Algorithm

Genetic Algorithm

Project 2: Genetic Algorithm

Energy as a function of dihedral angles

Project 2: Genetic Algorithm

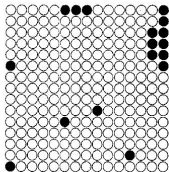

Project description:

- Implement the genetic algorithm in Python.
- Use a force field to calculate molecular energies.
- Use the genetic algorithm to energy minimize alkane molecular structures.

Project 3: 2D Ising Model

Representation of 2D magnetic solid

Project 3: 2D Ising Model

Project description:

- Simulate the 2D Ising spin lattice.
- Implement the Monte Carlo Metropolis-Hastings algorithm.
- Calculate properties such as heat capacity, magnetization, and magnetic susceptibility.

Project description

General:

- Programming is done in small groups
- The reports are individual.
- The language is Danish or English.

Supervisor:

- Jimmy is supervisor for **Genetic Algorithm**.
- Lars is supervisor for **Diffusion** and **Ising-model**.

if stuck:

1. Collaborate with other groups.
2. Write an email and make an appointment to meet with the supervisor.
